

# NixOS web hosting for everyone

Bootstrap new projects and provision them as **NixOS** servers on DigitalOcean.

Next-gen declarative server configuration for freelancers, entrepreneurs and digital agencies.

Try our Open Source plan for **free with no credit card required!**

[Start deploying NixOS servers](#)

The screenshot shows the Shipnix dashboard for a server named 'test-server-one'. The interface includes a left sidebar with navigation options like Servers, Providers, NixOS image, Billing, and Support/Feedback. The main content area displays server details: Region (tor1), Disk size (25 GB), Memory (1 GB), and CPUs (1). It also shows Remote SSH access with the command `ssh ship@68.183.197.169`. Below this, there are sections for Deploy options (Branch or commit hash: origin/main, Build with --impure flag: off), Version control (Clone git repository: `git clone git@github.com:codeFant/test-server-two2.git`), and Server events (a list of recent events like 'nixos-rebuild for test-server-one' and 'Provision DigitalOcean droplet').

**Convenient pre-deployed  
starters.  
You can just start coding**

**... more to come soon**

Develop faster, deploy faster

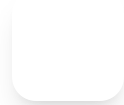

## Streamline your entire development workflow

With the power of the Nix package manager and NixOS, we are able to provide an integrated development environment and DevOps solution in a way you can fully customize.

### No funny abstractions

We provide idiomatic Nix flakes and NixOS configurations in our starters. That's a feature, not a bug!

### SSH access

Preload your SSH keys before creating your servers and easily log in to your server console.

## **DevOps as a function**

Nix gives you a fully integrated, functional language to configure databases, services and system packages.

## **Convenient starter projects**

We generate starter projects for you with an integrated development and deployment workflow.

## **No vendor lock-in**

The servers you create with Shipnix are yours to do with what you want. Even if you decide to not continue using Shipnix.

## **Integrated with top server providers**

We currently support DigitalOcean and will ship automated integrations for more server providers soon.
