PlanetScale's cloud is trusted by companies you know and love.

New

PlanetScale Serverless Driver for JavaScript

A Fetch API-compatible database driver for serverless and edge compute platforms.

[Check out the repo](#)

New

PlanetScale Boost

Up to 1,000× your query performance in just a few clicks with our groundbreaking query cache.

[Join the waitlist](#)

Powered by

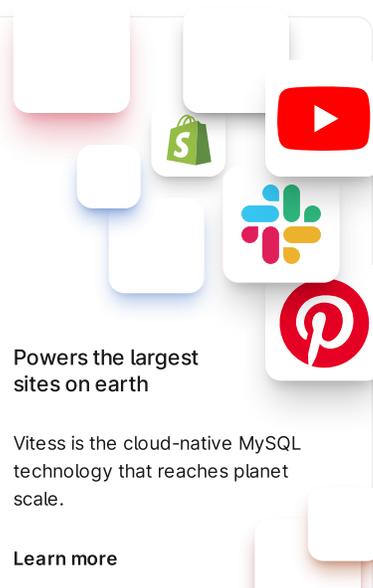

Built at Google to scale YouTube.com to billions of users, Vitess is the world's most scalable open source database.

[Learn more about Vitess](#)

Millions of queries per second

Large query volumes and predictable scalability through horizontal scaling.

[Read the benchmark analysis](#)

Powers the largest sites on earth

Vitess is the cloud-native MySQL technology that reaches planet scale.

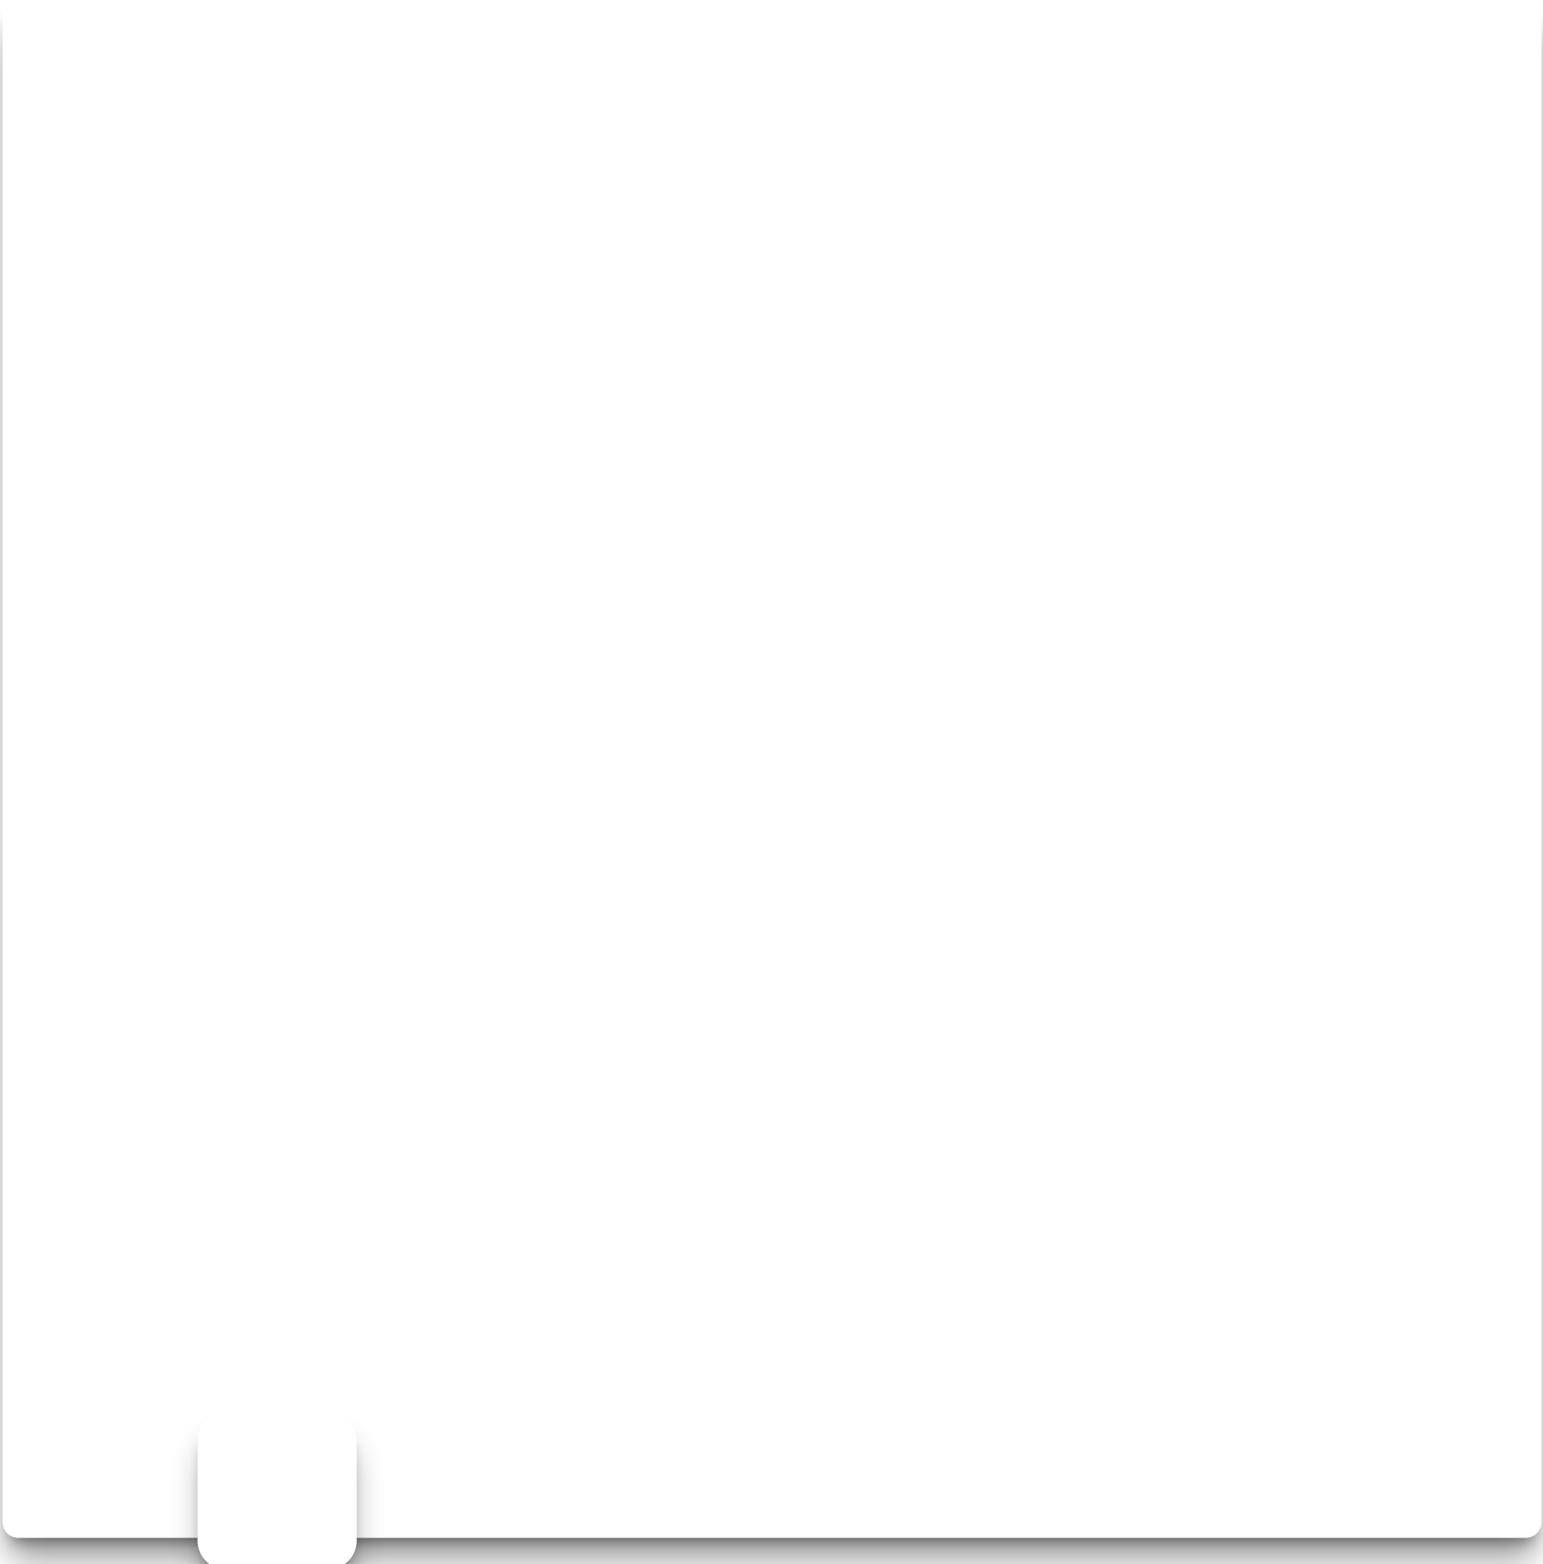

[Learn more](#)

Consistent innovation

PlanetScale employs the core team of Vitess maintainers.

[Learn more](#)

"Databases are hard. We would rather PlanetScale manage them. Our team wants to focus on helping our customers meet their health and fitness goals, not the database servers."

Chris Karper

Engineering Director, MyFitnessPal

Introducing

PlanetScale Boost Beta

Up to 1,000× faster queries
with our groundbreaking caching technology.

In just a few clicks, PlanetScale Boost makes the queries you choose faster.

Find a slow query pattern using Insights and activate PlanetScale Boost.

No TTLs, no invalidation logic, and no caching infrastructure to maintain.

[Join the waitlist](#)

Insights

Find problems in real time

Fully integrated and real-time insights into your database performance. No third-party application monitoring platform required.

[Learn more about Insights](#)

Deliver consistent performance for your users by finding poor performing queries in seconds

Better understand your billing usage through visibility into how many rows your queries scanned

Tag your queries inside your application and drill down to find problems

“PlanetScale hits all three things that matter to me as an engineering leader: A system I can trust, cost structure that scales with me, and a huge boom to my team’s overall effectiveness.”

Todd Berman
CTO, Attentive

Branching

Branch your database like you branch your code

```
'id' bigint unsigned  
'email' varchar(255)  
'admin' tinyint(1)  
'created_at' datetime  
'updated_at' datetime
```

Schema diff

Review your schema changes

Deploy requests

Database DevOps

Schema revert

The world's first data migration time machine

Insights

Database performance metrics at your fingertips

"Migrating from Amazon RDS to PlanetScale was painless and since moving we've experienced significant improvements in reliability, scalability, and productivity."

Andrew Barba
CTO, Barstool Sports

Regions

Scale to the edge

Northern Virginia (us-east-1)

Reads: 4k rows/s

Primary

Singapore (ap-southeast-1)

Reads: 36.2k rows/s

Read-only

Add region

Create read-only database regions to support globally distributed applications and better serve your users worldwide.

[Learn more about Portals](#)

Low operational overhead: Spin up as many regions as you need with the click of a button

Lower database read latency by reducing the geographic distance between your users and reading data

Connect

Your data,
wherever you need it

Make your PlanetScale data accessible across your organization by safely extracting and loading data from PlanetScale into other databases, such as BigQuery, Snowflake, or Redshift.

[Learn more about Connect](#)

Extract data to other sources

Supports analytical workflows

The enterprise-grade security and privacy practices your data deserves.

SOC 2 Type II reporting

PlanetScale continuously monitors and reports primarily using System and Organization Controls (SOC) 2 Type 2.

[Learn about our security reporting](#)

Business Associate Agreements

PlanetScale can enter into Business Associate Agreements (BAAs) with customers deployed on Single-tenant environments.

[Read our HIPAA announcement](#)

Encryption in transit and at rest

PlanetScale databases and their client communications are AES encrypted throughout the PlanetScale platform.

[Learn more](#)

Data Imports

Migrate to PlanetScale in three simple steps

Keep your existing database running while we do the import

No need to dump data or restore from backup

Migrate fully online with no downtime

You've done all the work already.
Let us take it from here.

[Import your data](#)

CLI

Manage your database without leaving the terminal.

Connect to your PlanetScale database with a fully functional shell for importing data, querying, and more.

Control your workflow

Create databases, branches, deploy requests, and more from the command line

Hassle-free database connection with `pscale connect`

The last database you'll ever need

Your business deserves a predictable database.

Never worry about another 3am wake-up call saying the site is down. Give your engineers the power they deserve with a PlanetScale database today.
