Make your terminal snow

🔗 snowjob.sh

```
1  #!/bin/bash
2
3  LINES=$(tput lines)
4  COLUMNS=$(tput cols)
5
6  declare -A snowflakes
7  declare -A lastflakes
8
9  clear
10
11 function move_flake() {
12     i="$1"
13
14     if [ "${snowflakes[$i]}" = "" ] || [ "${snowflakes[$i]}" = "$LINES" ]; then
15         snowflakes[$i]=0
16     else
17         if [ "${lastflakes[$i]}" != "" ]; then
18             printf "\033[%s;%sH \033[1;1H " "${lastflakes[$i]} $i
19         fi
20     fi
21
22     printf "\033[%s;%sH\u274$[(($RANDOM%6)+3)\033[1;1H" "${snowflakes[$i]} $i
23
24     lastflakes[$i]="${snowflakes[$i]}"
25     snowflakes[$i]=$(( ${snowflakes[$i]}+1 ))
26 }
27
28 while :
29 do
30     i=$(( $RANDOM % $COLUMNS ))
31
32     move_flake $i
33
34     for x in "${!lastflakes[@]}"
35     do
36         move_flake "$x"
37     done
```

38

39 sleep 0.1

40 done

If your terminal font supports it you can replace \* at line 22 with ❄️ to make it more festive

**amstan** commented on Dec 21, 2011

Can you make it appear on top of something that's already running?

**x37v** commented on Dec 21, 2011

awesome!

**allaun** commented on Dec 21, 2011

I named the script as snowjob, and this is the output?  
snowjob: 11: Syntax error: "(" unexpected

**supercheetah** commented on Dec 21, 2011

Like it!

**sontek** commented on Dec 21, 2011

Author

[@allaun](#) What shell are you using? You can replace function move\_flake() with function move\_flake (removing the parens) and it'll work for you

**EmbeddedLinuxGuy** commented on Dec 22, 2011

Nice. Also you can rotate different flake glyphs if you replace \* with `\u2742${($RANDOM%6)+3}`

**sontek** commented on Dec 22, 2011

Author

[@EmbeddedLinuxGuy](#) That is *awesome*, thanks!

**skihero** commented on Dec 22, 2011

cool!

**blottis** commented on Nov 19, 2015

Thanks for the script it is very cool, but could you provides us with some additional info about how to make it more functional ... for example how to make the snow appear on a functional terminal screen as [@amstan](#) stated in his comment. I am new with bash scripting and want to use your code to decorate a script I am creating but I can not deduce where to put my code... thanks

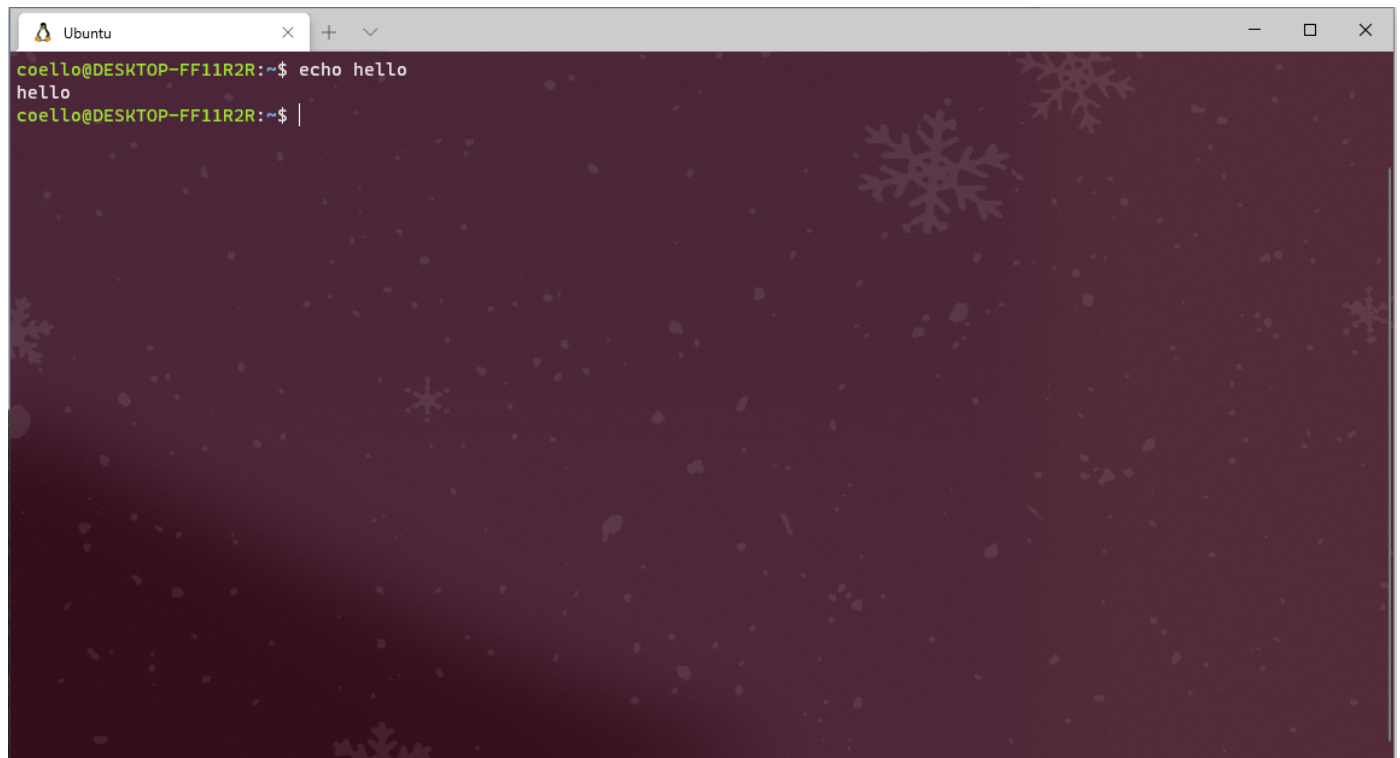

**ChrisCoe** commented on Jan 31, 2021

**@amstan @blottis**

I've also been trying to get the snow effect as a background on my running terminal. I don't think this is possible without some major refactoring in the bash script as the print out to stdout would collide with normal terminal function use.

In case you are like me and found this post years later, many modern terminals now have built in functionality for effects. I've been using `Windows Terminal` to get the desired snow effect I want.

**sontek** commented on Jan 31, 2021

Author

Yeah, the only way to get the effect during usage is built-in features of the terminal like shaders and stuff like what you did for the windows terminal. This is a generic / cross platform way of getting effects that doesn't depend on the shell at all
