

Breaking - Twitter database leaks for free with 235,000,000 records.

As I anticipated yesterday, the database was circulating heavily and is now leaked.

The database contains 235,000,000 unique records of Twitter users and their email addresses and will unfortunately lead to a lot of hacking, targeted phishing, and doxing.

This is one of the most significant leaks I've seen.

We also posted it on Twitter in case you are there too ([twitter.com/RockHudsonRock/sta...](https://twitter.com/RockHudsonRock/status/1518111111111111111))
