

Review merge requests in Slack to **merge code** faster

Improve your code review process by creating an ephemeral channel per merge request.

BACKED BY

Review merge requests up to 50% faster

Axolo helps teams merge pull requests faster, increasing productivity. No more worrying about stale pull requests or losing track of colleagues' work.

Axolo has made it easier to hold developers and QA engineers accountable for reviewing and merging pull requests. Our average PR time-to-merge was 2.40 days before Axolo, this has been reduced to 1.51 days after only using it for 2 weeks.

Dan

1 MR = 1 channel

Axolo centralizes the whole merge request conversation inside an ephemeral Slack channel.

Old way

Axolo way

What are the benefits of the 2-way sync?

End context-switching

Handle code reviews from your Slack channels. Every comment from GitLab will be sent to Slack and vice versa. Axolo integrates with your favorite tools and keeps the context in your channels. Connect Axolo to Jira, Sentry, and all your GitLab applications.

Document code review conversations

A single source of truth saves time and energy. Everything that is said is saved everywhere, every time.

Improve your codebase

Axolo increases engagement in code reviews, which translates into better code quality.

Some of our key features

Daily merge request reminder

Decide when you want your team to be reminded about stale merge requests. Axolo sends daily notifications only if the merge request was not recently reviewed.

MR CI/CD and pipelines in Slack

Passively receive updates for your CI/CD inside your Slack channels. Axolo will notify you if there is a conflict, or if some CI/CD pipelines don't go through.

PR recap for efficient stand-ups

Set up Axolo to send daily MR recaps to specific channels to organize your stand-ups. Use these recaps to keep your team in the loop and accountable.

Know what your team is working on

With team-specific notifications, Axolo will send new merge request notifications in team channels and react upon the status of the MR (draft, awaiting review, work in progress, mergeable, ...). Automate your process of sending new MRs to your team.

Stay in flow with code review times

Organize your time with code review time slots and let Axolo notifies you only when you're available. Save your development sessions from distractions and stay focused while you code.

Loved by engineering leaders and developers

Proud to be working with high-performing engineering teams
