

Hey, GitHub!

Write code

Difficulty typing? Use your voice to code without spelling things out by talking with GitHub Copilot.

Features

Return a boolean

Write/edit code

Just state your intent in natural language and let **Hey, GitHub!** do the heavy lifting of suggesting a code snippet. And if you don't like what was generated, ask for a change in plain English.

Go to the next method

Code navigation

No more using mouse and arrow keys. Ask **Hey, GitHub!** to...

- go to line 34
- go to method X
- go to next block

Run the program

Control the IDE

"Toggle zen mode", "run the program", or use any other VisualStudio Code command.

Explain lines 3 - 10

Code Summarization

Don't know what a piece of code does? No problem! Ask **Hey, GitHub!** to explain lines 3-10 and get a summary of what the code does.

Type less, code more

Write code, navigate the codebase, and control the VisualStudio Code with your voice.
