Our community is crucial in shaping the ongoing development of our open-source OPNsense® software products.

With over 300.000 participants worldwide, our community is not just a collective; they're our partners in progress. This collaborative and continuous pursuit of improvement is at the core of our ethos.

We recognize the power of Open Source and commit to supporting it. We value community feedback, engaging with users to ensure our products evolve with the dynamic digital landscape. Community testing helps us update software swiftly and develop our roadmap efficiently.

An open-source firewall that has built in support for Unbound DNS, strict Port Forwarding, GeoIP support, and much more to name! OPNsense is as customizable as the hardware it can run on.

Thank you for the ingenious product which I already have in operation with customers

I just want to compliment you on what I think might be the best piece of Open source software I've ever encountered. I've used Linux exclusively for over 16 years, with a few forays into FreeBSD. The level of quality in OPNsense it's amazing. Every time I've updated whether it be package updates or a major release it's been absolutely flawless. Every feature I've used is working perfectly

The OPNsense® Business Edition is designed for companies, enterprises, and professionals seeking turnkey, high-end security solutions without the hassle.

The free version of our software serves as a dynamic platform where we test and refine new features before incorporating them to the Business Edition. The paid version unlocks premium features and advanced tools, providing a selective upgrade path with extra commercial benefits.

Purchasing the paid version also supports the project, ensuring our community continues to benefit from ongoing innovation and improvement.
